

Write my essay

Write my extended essay for me Golden rules

Golden rules that will help the teacher to love students in your subject Any fun and productive presentation of the material starts with the enthusiasm of the teacher. We're not talking about different authoritarian methods to force a child to study a certain discipline, we are talking about curiosity, love of subject. And not a news the fact that the passion of the teacher is passed on to children. Sincere love for their work is the key to half of a teacher's success. And where else can you get 50%?

How is your lesson? Strictly according to the syllabus/training manual? In vain. In this case, much is lost. If you want to change something, improve the atmosphere, change its course, it will help to improve the yield of students.

We offer to your attention the approximate algorithm of the lesson could be the beginning of that same love:

1. Enjoy the class before you start to explain (for example, tell about the surprise at the end of the lesson, but do not be fooled!).
2. Intrigue them.
3. Explain why they need new information.
4. Show and tell your enthusiasm, delight to explain.
5. Give an unexpected example, but simple and clear.
6. Prove the practicality of knowledge, because it is best to remember that you can test to use here and now in everyday life.
7. Ask students to paraphrase what you said, with their own examples.

Remember, important is not what you know much on the subject and can talk about it, and the ability to explain why it is necessary for the student.

Important! Friendly and welcoming atmosphere will help to bring you closer with students. And if the latter understand, you can actually learn something useful, then consider that almost fall of the wards in subject.

Become an example to follow

Children perceive all the information both useful and harmful for them. In your power to find a way to convey to them knowledge of the best that there is in write my extended essay for me this world. Show your admiration for the things you want to teach. It is proved that even complex mathematical equations readily accepted if the teacher explains with enthusiasm, accessible examples, like only yesterday he was sitting at the Desk and wrote down everything in a notebook.

Tell me something interesting on the subject not on the program. For example, when ninth-graders are studying the works of T. G. Shevchenko, take a minute to tell me about how he was, he loved who he was friends show that he was a real person, not a harsh man with a portrait.

Such information will resonate with students, especially in this turbulent period for them. And you will demonstrate a knowledge deeper than that required program. Moreover, you show that you understand the needs and anxieties of adolescents. Be consistent in their words and actions and stay yourself.

Important! Show by example that knowledge is a "cool";, and knowledge of your subject will turn the child into a member of a private club where only the chosen one. And do not lose your curiosity, read additional literature, aggravate your knowledge, continue to learn, learn new things, then you will have something to talk with the students and what they inspire.

Examine your habits

Even if the theme of the lessons will be interesting, most likely that it will not accept. Unfortunately, the reason for this can be the teacher. Children are less likely to want to receive information from teachers who abuse such manifestations:

1. Aggressiveness, rudeness, use of abusive words:

◆ Your mind is only a janitor to go to work.

2. Indifference and irresponsibility:

◆ I do not repeat twice! Did not ◆ not my problem.

3. Injustice to an individual or to all:

◆ While you're sick, the class was so good;

4. The lack of respect for the individual pupil:

◆ I just explained! Can't solve the problem? Your brother is much smarter than you were!

5. Unwillingness to address pedagogical issues:

◆ No one goes home until someone admits;

6. Excessive pedantry:

◆ You pulled out a grubby piece for independent work, reduce the rating by two points!

With this approach to work it is difficult to hope for a favor from children. Analyze their behavior, neutralize the irritants. If we can get rid of the evil manifestations that are listed in the list, new perspective on the profession. A love for children motivates

the teacher to give full on lessons.

Best Custom Writing

Important! We are all human, and sometimes you want to snap, but do this for your students because chances are that you will long to see in nightmares and after school.

Allow learners to make mistakes, but don't punish them for it

Proven by psychologists, the fear of making mistakes can significantly impact the performance of an adult, and what can we say about the baby? Hence, seemingly unmotivated request to the parents not to go to school, poor health and, finally, poorer performance.

Best Custom Writing Service

Err okay, it's the experience that leads to improvement. Knowing your subject is only open for the student. He may be wrong, but this does not mean that he is not able to comprehend and understand what you have said. Help your child to feel free in the classroom, let the fear of mistakes does not hinder it.

Important! Motivate the search for truth, encourage the right answers to students is not stopped halfway. And then there will be a greater chance that the student will love your item as much as you love him.

Learn to think, not to cram

Teach your child in the classroom to think, to build a logical chain. Explain that this approach to the study of the subject in the future well will save time in the process of preparing for examinations or other important tests. Jagged rules will be forgotten in time, and the ability to think will last a lifetime. Besides, you'd like to see students “understood” just recounting word for word a tutorial? Surely, no.

Important! Bring available for children examples that intersect with their area of interest. Show your students that your subject will be studied much easier, it is only necessary carefully to consider a specific topic and create a logical chain to remember. Then the students will love you and what you are doing.

So the kids loved your item, it is helpful to admire it and to make little effort to open children to the boundless world of individual discipline. Nobody said that being a teacher is easy, but your efforts will be appreciated understanding that you were able to touch the soul of the most demanding in the world of critics ♦ children.
